

It is a huge honor for me to receive "Yamada Haruka Memorial Award" which is given every year to female researchers to encourage their work in the field of natural science. I would like to thank the Dean of School of Science, and Technology Dr. Kazuaki Kitahara for choosing me for the award. This award will always encourage me to work with more dedication and motivation. I am deeply honored by my superior, Dr. Isao Takahashi for always believing in me and encouraging me. I am thankful to all the lab members of Takahashi Lab who are always ready to help me no matter how small or big the problem is. Joining Takahashi Lab at Kwansei Gakuin University as a doctoral student was one of the best decisions that I made. I am glad that I could contribute to the field of natural science through my research work. The research problem that we are working on in our lab is very fundamental in the field of polymer science and I really believe that this work will help us to contribute towards the progress in polymers.

I would like to thank all the people around me including the office staff, my house owner, and my Japanese friends who always try to make my stay in Japan as comfortable as possible. They are the people who indirectly contribute to my research work as I don't have to worry about day-to-day problems that a person might face in a foreign land, and I can focus on my work without my undivided attention. Finally, I am thankful to my family and friends who are always there to encourage me to move forward and do the best in my research work.
